

Getting started

Well... the first step to start with d-diot is to build your own hub.

At the moment this step requires a discrete amount of your time, because a pre-soldered board is not yet available, but the building process is part of the fun and following the steps of the guides it is not a so difficult task!

On the other side the software part is easy, simply [download](#) the d-diot image and burn it to an SD card.

- [Hub v.1.0](#)
- [Hub v.2.0](#)
